

Wheel Direction Indicator

Innovative Parking Aid System **WheDI**

Get the feel how the front wheels are positioned !

The new innovative safe aid system for car parking that indicates the direction and angle of the front wheels with a real time indicating for the directions of the car. No cable or electricity required. It works by gravity. Mount directly to the centre of steering wheel with a self-adhesive sticker. It will be very useful aid for parking and starting car by indicating of front wheel positions from 0 to 50 each revolution degrees.

WheDI makes driving more fun !!

The WheDI is developed to aid safe car parking and driving in a narrow space as it allows the driver to recognize the direction angles and backward motion of the front wheels. It can be easily attached on the centre of the steering wheel.

Most car drivers have difficulty while parking or moving the car and may drive backwards and forwards several times due to their inability to accurately determine the direction of the wheels.

This may cause unnecessary tire wear and energy costs !

Beginner drivers gain confidence as they are learning for to park !

Rudder Position Indicator

RuPI

The Most Beautiful Indicator ~

Rudder Position Indicator **RuPI** Innovative Boating Aid System

The RuPI (Rudder Position Indicator) is developed to aid safe anchoring and docking even in a narrow space manoeuvring as it allows the driver to recognize the angles and direction motion of the bow of the motor boat. It can be easily attached on the centre of the steering wheel.

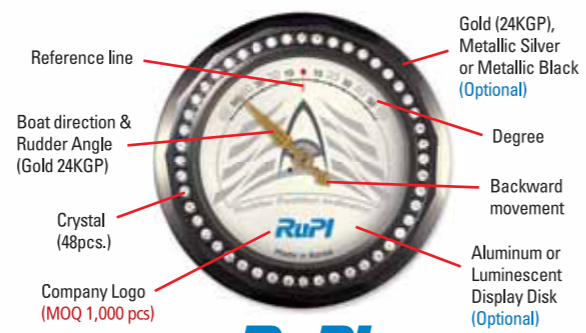

RuPI makes boating more fun !!

Decorated with **Crystal**

Most novice boat drivers have difficulty while anchoring or docking the boat and may drive backwards and forwards several times due to their inability to accurately determine the direction of the rudder.

This may cause unnecessary stress on the boat and result in an increase in fuel costs.

The RuPI provides boat drivers the instrument they need to properly dock and undock the boat.
